

KÖBER ENERGY HOLDING

Climate & Decarbonisation Policy Statement

Edition 1.0 · September 2026 · Approved by the Board of Directors

KÖBER Energy Holding builds and operates energy-storage infrastructure, manufactures BESS, PCS and medium- and high-voltage transformers in Romania, and develops photovoltaic, hybrid and behind-the-meter clean-energy projects. We recognise that climate change is the defining risk of this century and that our activity is, by its nature, part of the solution. Through this statement we publicly commit to the undertakings below.

≥ 3 GWh

OPERATIONAL STORAGE
by 2029

2030

NET-ZERO SCOPE 1 + 2
market-based

SBTi Net-Zero Standard

Our commitments

- We decarbonise the energy system.** We will commission at least 3 GWh of storage capacity in Romania by the end of 2029 and operate the assets so as to maximise the renewable energy absorbed and the fossil generation displaced. We report avoided emissions annually, calculated and verified separately from our inventory.
- We reach operational net zero in 2030.** We eliminate Scope 1 and 2 emissions through 100 % renewable energy (with progressive hourly matching), full electrification of processes in the Brăila factories, an electric fleet and the elimination of SF₆ from all new switchgear, ahead of Regulation (EU) 2024/573.
- We manufacture with declared carbon.** Every battery, power conversion system and transformer produced by KÖBER carries a carbon footprint calculated under ISO 14067 / EN 50693 and the EU methodology, verified by a third party, and a digital battery passport in accordance with Regulation (EU) 2023/1542 — from the first unit delivered.
- We reduce carbon in the supply chain.** We apply carbon-footprint thresholds in cell procurement (≤ 50 kgCO₂e/kWh from 2028), recycled-content requirements, due diligence for critical raw materials and an internal carbon price (€80/t, then €120/t from 2030) in all investment decisions.
- We design for circularity.** Augmentation instead of replacement, design for disassembly, second life and 100 % end-of-life collection and recycling, with authorised European partners.
- We build resilience.** We assess the physical climate risks of every site before the investment decision and size our assets for the climate conditions of the 2040s.
- We govern and report transparently.** Climate responsibility is anchored at the level of the Board of Directors and linked to executive remuneration. We publish an annual report aligned with ESRS E1 / IFRS

S2, with external assurance, and submit our targets for SBTi validation — even though legislation does not yet require us to.

- 8. We align with European and global frameworks.** The European Climate Law (–90 % by 2040), the Batteries Regulation, the Net-Zero Industry Act, the EU Taxonomy, CBAM, the electricity market reform, Romania's NECP and the Paris Agreement are the benchmarks against which we measure our progress.

Application

This policy applies to all entities controlled by KÖBER Energy Holding, to employees, contractors and business partners, and is detailed in the Climate & Decarbonisation Strategy 2026–2035, the Supplier Code and the related internal procedures. It is reviewed annually by the Board's Sustainability & Climate Committee.
